ABOUT ME

- To broaden my horizons, after 12 years in retail/sales, I delved into IT in 2022, **adapting to the technological evolution** that is so typical of the market. Accordingly, I obtained a **Frontend and then a Fullstack-API Developer** qualification at the EU-funded intensive programming course of the "GINOP-6.2.8-20 Újratervelés Program"
- During the Fullstack training, we gained significant experience in CI/CD development (GitHub, JIRA) in a "simulated work environment" in a team of 5, during which we developed a ticketing application together, following **agile SCRUM methodology**.
- In the development of my project work detailed below, I have been mostly immersed in **MERN technologies and RESTful API**. I wrote tests in JEST.
- Currently, I am seeking opportunities in **Sales/Business Development Management, programming/development support, and other management roles** where I can leverage my sales/business development background alongside my IT skills. I have **10+ years of management experience**.
