ABOUT ME

- As a **career changer**, after 12 years of trade/sales, I headed towards IT, I envision my future in this sector. Accordingly, I obtained a **Junior Frontend and then a Fullstack-API Developer** qualification at the EU-funded intensive programming course of the "GINOP-6.2.8-20 Újratervelés Program".
- During the Fullstack training, we gained significant experience in CI/CD development (GitHub, JIRA) in a "simulated work environment" in a team of 5, during which we developed a ticketing application together, following **agile SCRUM methodology**.
- In the development of my project work detailed below, I have been mostly immersed in **MERN technologies**. I wrote the **tests in JEST**.
- I am currently looking for opportunities as a **Frontend and Fullstack developer**, primarily using the mentioned STACK, but I am also happy to learn new technologies. I am planning to learn e.g.: React Native, Vue, Next, Angular, C#.
- In 2-5 years, I would like to move towards a management or IT Project Manager position.
